

What is Render?

Render is an oral Bible translation software developed and tested by three partnering agencies: Seed Company, Pioneer Bible Translators and Faith Comes By Hearing.

Translating with Render

Render is a software that guides oral communicators in producing oral Scripture for their own language group. One or more (up to four) audio recordings are pre-loaded into Render to act as references for a new translation. A translator or translation team listens to the source languages, translates orally into the target language and records the new translation in Render.

Components

- Drafting
- Revision
- Peer review
- Community testing
- Back translation
- Audio notes
- Transcription of notes and back translations
- Consultant checking

Features

- Acts as a workflow management system
- Incorporates all Bible translation roles
- Guides users with color-driven buttons
- Has an icon-based interface
- Is made for people with varying levels of:
 - education
 - literacy
 - technological savvy
